INDUSTRIAL HYDRAULICS

Industrial Hydraulics are distributors for Banlaw and accredited nozzle repairers. We carry an extensive range of couplings, receivers, nozzles, vents and swivels in stock.

Introducing the Next Generation Refuelling Nozzles

This new generation nozzle incorporates a number of key design upgrades to further improve the performance, safety, and durability of our nozzles in the market. These upgrades include;

- New carry handle design, incorporating stainless steel for added durability.
- Strengthened operating T-handle.
- Measures to further minimise contamination ingress into the rear chamber of the nozzle, particularly the piston bore.
- A new nozzle body, comprising a stainless steel section at the front for increased durability and improved latching onto the mating fuel receiver.
- Serviceable (replaceable) stainless steel bore sleeve in the rear piston chamber.

Flush face coupling range

Banlaw's newest range of couplings, the Flush Face series makes it simpler to ensure zero contamination from site related dirt and cross contamination. The Flush Face coupling is designed to enable the operator to wipe the coupling face clean before engaging in the transfer hose. No exposed recesses means that only clean oil, grease or other fluid is transferred from the service unit to machine. Couplings are colour coded and sized so that they cannot be incorrectly connected.

Choose a classic vent or protect your diesel fuel system from the damaging effects of airborne particle contamination with Banlaw's filtered vent. Available in a range of styles to suit all applications, the Banlaw vents are an integral part of the Banlaw refuelling system.

Banlaw receivers are manufactured from stainless steel and other fit-for-purpose materials, to offer industry leading performance, safety & durability.
